This article reviews the definition of quality in cardiac ultrasound examinations, the sources of variability in these examinations, and the methods that are used to optimize the quality of these images. The sources of variability include patient-related factors (eg, cardiac disease, body habitus, cardiac medications), equipment-related factors (eg, probe-fluid interface), and technical factors (eg, acoustic window). Imaging techniques used to optimize image quality include harmonic imaging, electrocardiographic gating, image processing, and image enhancement.A native of Calgary, James Donney is a storyteller, poet, performer, and social activist with a particular focus on queer activism, justice, community-building, and the power of place. He has appeared on CBC Radio, performed at the Vancouver Fringe Festival, the FACT Upcoming Queer Festival, and the United Nations in Geneva. In addition to his work with Feel So Good, Donney is a member of the Board of Directors for MuseÉmile, an international organization of creative educators which has built a globally recognized program for music, art, and educational equity in early childhood education. We are happy to announce that we are offering a \$5 discount for Feel So Good members who wish to purchase tickets to The Feeling So Good Project Showcase. Purchase tickets to the showcase here 82157476af
